

TIPS FOR CLEAN Towels

TOWELS

- ❶ **Hang towels to dry after use.** Mildew and mold will grow on towels if they are bunched on the floor or in a laundry basket. Even after washing the smell can be difficult to get out.
- ❷ **Wash towels on the hottest setting you can.** Consider adding bleach if they are white, or a color-safe bleach. Vinegar also works well in the rinse cycle.
- ❸ **Take towels out the washer quickly.** Again, mildew and mold.
- ❹ **Dry on high in the dryer.** This will kill more germs than even the washer.
- ❺ **Don't use fabric softeners of any kind.** They ruin the effectiveness and absorbency of the towel by depositing a layer of wax over the fibers.
- ❻ **Every so often, clean your washing machine.** This gets dirty too and the drum needs to be scrubbed with baking soda.
